TorZo furniture tops are finished using a durable, commercial grade polyurethane finish. This is an extremely high quality finish; however, it is not indestructible. Metal bases are finished with a powder coating. Powder coatings are much more durable and longer lasting than paint.

Cleaning

TorZo furniture tops and powder coated bases may be wiped with a damp soft cloth, either using mild soap and water or natural based mild cleaning solution. Most standard cleaning solutions contain either an alcohol or ammonia base, which over an extended period of time will harm the finish. Do not use alcohol or ammonia based cleaners. Do not use abrasive cleaners, as they will scratch and dull the finish.

Common healthcare grade sanitizers, including hydrogen peroxide and sodium hypochlorite are compatible with the polyurethane finish. Follow manufacturer instructions.

Surfaces scratches and scuffs

Light scuffs or scratches of the polyurethane finish may be buffed out. For deep scratches, sand lightly and touch up with a clear satin polyurethane spray finish.

Use indoors

TorZo furniture is recommended for indoor use only. In outdoor settings fluctuating temperature, humidity, and other environmental conditions may cause damage. The warranty does not apply to pieces used outdoors.
